Evaluation? Information Assessment Method

Information Assessment Method (IAM)

Main Purpose of IAM

Systematic & comprehensive
assessment of clinical information

- relevance
- **cognitive impact**
- use
- patient health outcomes

IAM: Potential applications

1. Compare electronic knowledge resources
2. Maintain quality of electronic knowledge resources
3. Document brief self-directed e-learning

Ecological Momentary Assessment

Three versions of IAM

1. PUSH context

e.g. rating an email alert

2. PULL context, mobile device, database

E.g. rating synopses of clinical research

3. PULL context, web, e-Book

e.g. rating highlights retrieved from book chapters

Dexamethasone may prevent headache recurrence after treatment of acute migraine

Clinical question

Does the addition of dexamethasone to standard therapy for acute migraine headache decrease the incidence of recurrent headache in adults?

Bottom line

This review found a significant benefit to adding dexamethasone to standard therapy for decreasing the risk of recurrent headache in adults presenting to the emergency department with acute migraine headache (number needed to treat [NNT] = 10). ([LOE =](#))

Reference

[Singh A, Alter HJ, Zaia B. Does the addition of dexamethasone to standard therapy for acute migraine headache decrease the incidence of recurrent headache for patients treated in the emergency department? A meta-analysis and systematic review of the literature. Acad Emerg Med 2008;15:1223-1233.](#)

Study design

N/A

Setting

Emergency department

Synopsis

Nearly two thirds of patients treated in the emergency department for severe acute migraine headache will have a recurrent headache within 48 hours. These investigators thoroughly searched -- without any language restrictions -- multiple databases, including MEDLINE, EMBASE, and the Cochrane Registry; bibliographies of retrieved articles; and abstracts from pertinent national conferences. Eligible articles included randomized controlled trials comparing adjuvant dexamethasone therapy initiated in the emergency department with standard therapy alone. Three individuals independently critically assessed each study for appropriate inclusion criteria and methodologic quality, with disagreements resolved by consensus. The diagnosis of migraine headache was based on standard criteria from the International Headache Society. Seven trials (N = 742 patients), each with a Jadad score of 5 (high quality), met the final inclusion criteria. The median dose of dexamethasone was 15 mg, given intravenously in 6 of the trials and given orally in 1 trial. Follow-up varied from 24 hours to 72 hours. Pooled results found a statistically significant benefit for adjuvant dexamethasone compared with standard therapy only (NNT= 10). The 1 small study of oral administration (8 mg) had comparable efficacy to the intravenous trials. Formal analyses found no evidence of significant heterogeneity in reported outcomes or of publication bias.

Application

The screenshot shows a software window titled "IAM (v74-204)" with a red header bar. Below the header, there is a list of objectives with checkboxes for selection. The objectives are:

- problem / decision-making about a specific patient
- Fulfill an educational or research objective
- Search in general or for curiosity
- Look up something I had forgotten
- Share information with a patient / caregiver
- Exchange information with other health professionals
- Plan, manage, coordinate, delegate or monitor tasks with other health professionals

Below the list, there is a section titled "Did this search meet this (these) objective(s)?" with "Yes" and "No" radio buttons. The "Yes" button is selected. At the bottom, there are "Previous" and "Next" buttons. A yellow arrow points to the "Relevance" section.

Objective	Yes	No

Information Assessment Method (IAM)

Developmental Procedures

History and development of IAM

Major steps

1. Pilot study: Separate qualitative & quantitative studies
2. Residents study: Cohort & multiple case
3. Systematic mixed studies review
4. PUSH mixed methods study: IAM usage & Validity
5. PULL mixed methods study: IAM usage & Validity
6. PUSH-PULL feedback to information providers

8-year research program

- Real world clinical settings
- Physicians, Residents, Pharmacists, Nurse practitioners
- Implications: Communication, information, CME, and KT

WHAT IS MIXED METHODS RESEARCH?

Combination of quantitative and qualitative methods to answer complex research questions

Helpful in medical informatics
(crucial socio-technical issues)

First handbook in 2003

Qualitative (QUAL) and quantitative (QUAN)

Portfolio of practice-based learning and practice improvement

Participant : Roland G

Search ID	Search Date	Search Keyword	Article Hit ID	Article Identifier	Date Rated	Article Title	Objective	Relevance	Impact	Specific Patient ?	Imp Conse

WHY DO WE MIX METHODS?

- QUAL data improved by QUANT data
(e.g., IAM-derived interview guide stimulates memory of searches for clinical information)
- QUANT data improved by QUAL data
(e.g., refinement of IAM cognitive items)
- How to interpret QUANT results (see “dyad” example)

*7 reasons for mixing QUAL and QUAN, see *Creswell & Plano Clark, Designing and conducting mixed methods research, 2007, Sage*

HOW DOES MIXING METHODS HELP US ANSWER OUR RESEARCH QUESTIONS?

Combining strengths of qualitative and quantitative evaluation

Research question: To what extent does *PUSH* lead to *PULL*? How?

Example

- QUANT: 22 “push-pull dyads” tracked
- QUAL: Interviews to explore dyads
- Understand why these rare events happened

Information Assessment Method (IAM)

Validity

The Canadian KTpush project

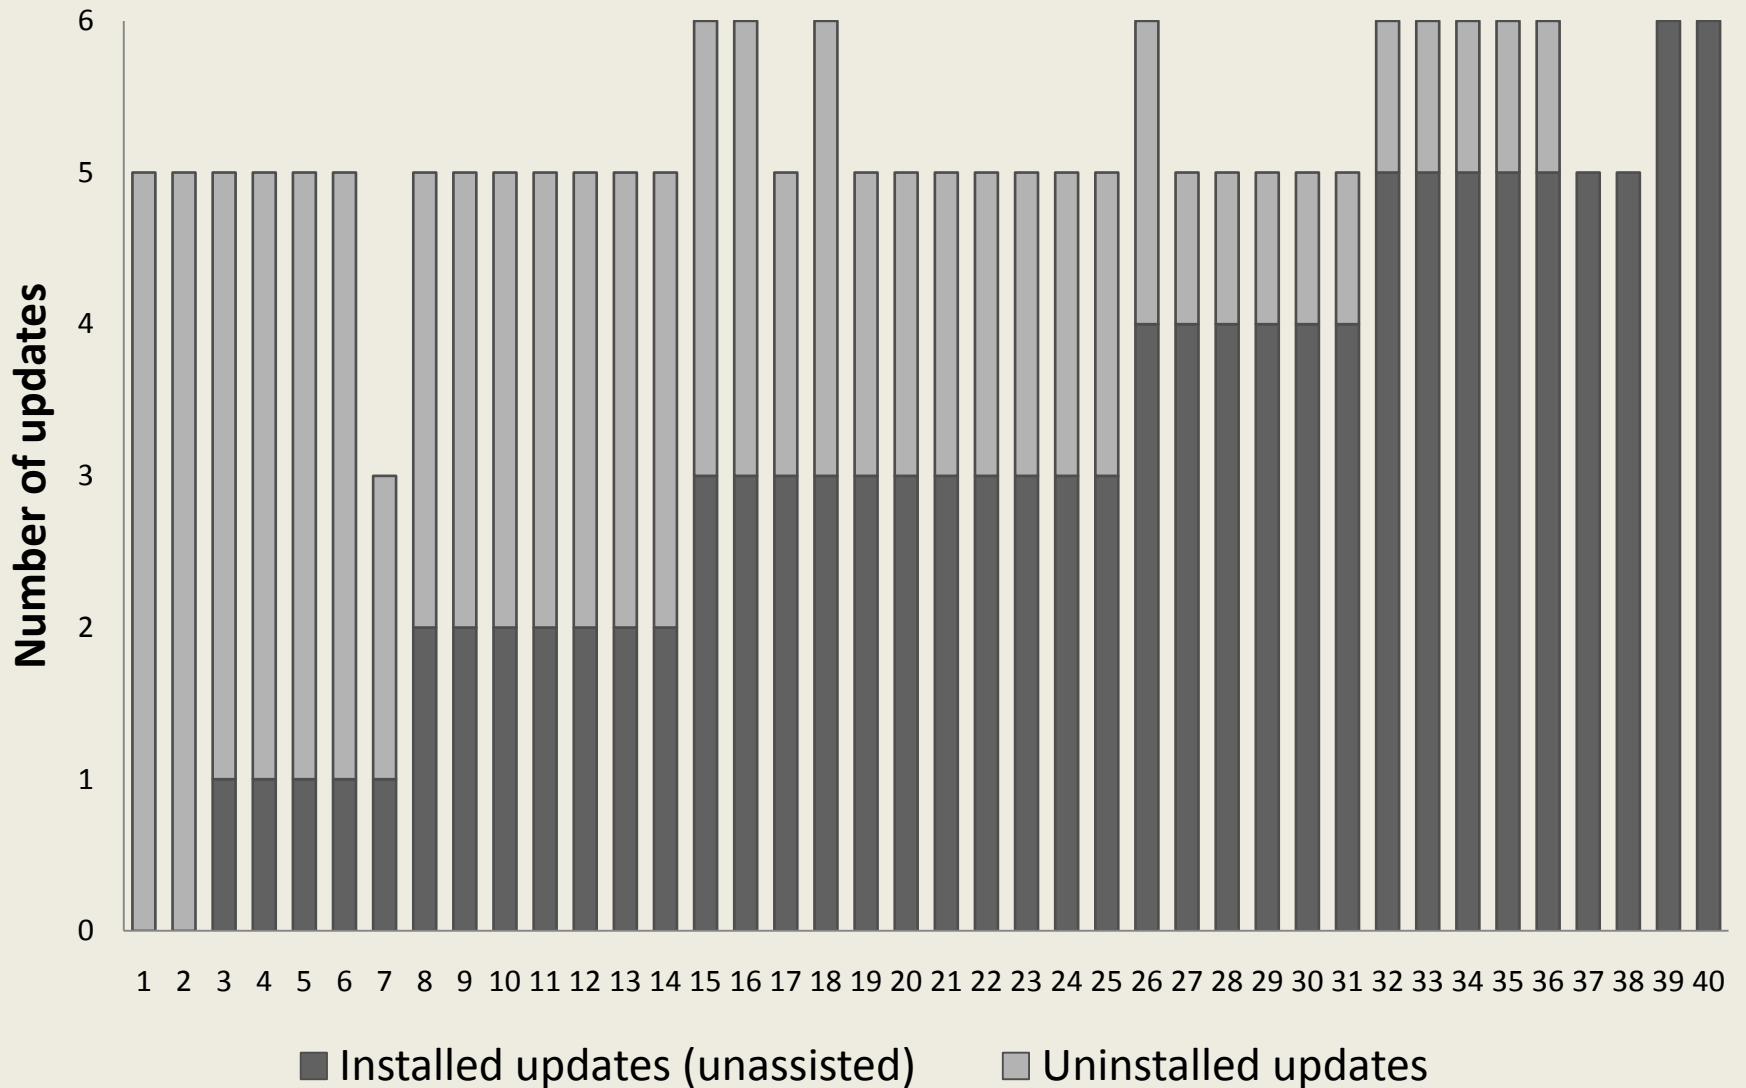

- 40 FPs
- 1-year prospective observational study
- “the real world”
- 1,800 rated searches
- 3,500 rated information hits
- Downloadable software for Pocket PC

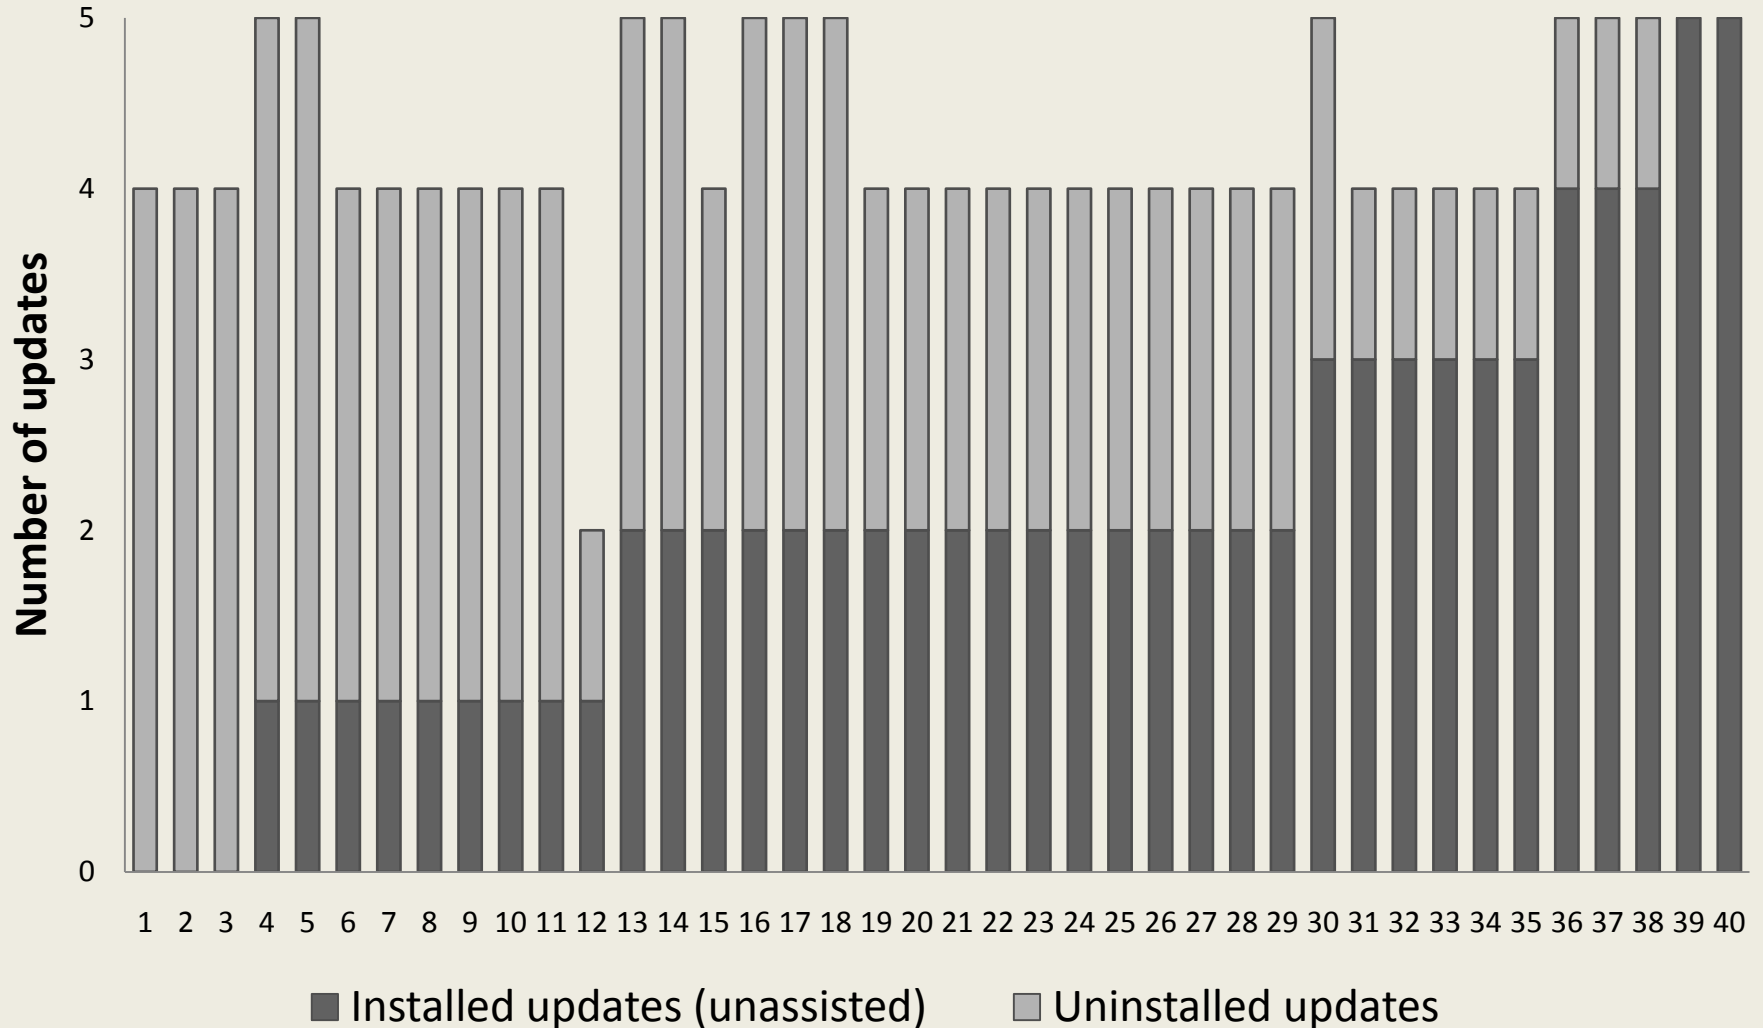

Do physicians manually update downloadable software on PDA?

- About 25% of FPs never or rarely updated on their own
- Many software updates were never installed
- Only a small number of FPs made all requested updates on their own

Semi-automated updating

Manual updating

Application

- 1,041 rated hits used for a specific patient

IAM, CME and EMR: The Future

- IAM and CME
 - We need more effective CME, using most effective methods
 - Learner-centred
 - Setting-sensitive: ‘point-of-care’ learning
- EMR, Infobuttons and IAM
